Visual studio 2015 freezes on startup

For the most part, I love Visual Studio, but some weeks I hate it very deeply :-). In its current incarnation VS 2015, but also from its origins in VS.NET 2002, it is such a huge piece of software, composed of so many parts, that it's quite fragile and not very resilient. Microsoft knows it and so it recommends to install betas and previews on non-production machines, that is, on virtual machines. Also, it is painfully slow to install unless your computer is fast and has a SSD. The other day I created a Hyper-V virtual machine on the Surface 4 Pro that I use at work to install VS "15" Preview 5. I don't know how it happened exactly: I think that I deleted an existing Hyper-V virtual machine with the Visual Studio emulator for Android that I installed days ago for a Xamarin course and that I had to uninstall because in turn I had uninstalled Xamarin because it slowed my VS 2015 startup quite noticeably and Xamarin projects took minutes to create using the New Project menu (I want to love Xamarin, so I will use Xamarin Studio on my Mac). Anyway, my Surface laptop suffered a horrible BSOD at startup (APC_INDEX_MISMATCH or similar). Update Nov 9, 2016: The BSOD crash APC_INDEX_MISMATCH was caused by an update to the Trend Micro Antivirus+ 2016. The solution is to update to Trend Micro Antivirus+ 2017, as explained in their web page Getting stuck on Windows Startup Repair after updating Trend Micro Security. I could only recover it going back to a restore point. Visual Studio 2015 got an inconsistent state as a result. So I uninstalled it. And I uninstalled VS 2010 too, which anyway was suffering a crash for months each time I tried to show the properties page of any project. And I went to the Control Panel and I removed tons of stuff that were related to Visual Studio. But I forgot to delete the Visual Studio entries in the Registry and remaining folders on disk. When I reinstalled VS 2015 and launched it, the main window did not respond to mouse clicks, only a "ding" sound, as if it was shown an invisible modal dialog. So I uninstalled VS 2015 again and this time I deleted registry entries and remaining folders on disk. After reinstallation, just after the splash screen I got this empty modal dialog (and the main screen was not shown): I tried to uninstall, repair, execute devenv.exe with all kind of "reset" flags, etc. to no avail. Since the alternatives are to reinstall Windows, or to give up VS 2015 and wait for the RTM of next VS "15" version, I decided to troubleshoot the problem. There are at least three approaches to diagnose Visual Studio startup problems: The first one is to use the own activity log of Visual Studio. To use this approach, click the Start button of Windows, type "Developer" and the result should appear in the first positions: At the Developer Command Prompt, type: devenv.exe /log C:\Users\Desktop\MyVSLog.xml That will launch Visual Studio and will create the log on your desktop (by default Visual Studio would create it on another location). Close or kill Visual Studio and two files should appear on your desktop: MyVsLog.xml and ActivityLog.xml. The ActivityLog.xml file is a XML stylesheet that allows the XML file to be viewed nicely formatted on a browser (the XML file has this line for this magic to work:). In the output, focus first on red items: So, in my case the problem is: Could not load file or assembly 'Microsoft.VisualStudio.Services.Client, Version=14.0.0.0, Culture=neutral, PublicKeyToken=b03f5f7f11d50a3a' or one of its dependencies. The system cannot find the file specified. The second approach is to use the Assembly Binding Log Viewer (aka "fuslogvw"). This tool applies to any application that uses .NET (not only to Visual Studio) and allows you to know which assemblies couldn't be loaded and which paths were probed. To launch it, open the Developer Command Prompt of the previous approach but this time with admin rights (right-click "Run as administrator"). Then click the Settings button: If the radiobuttons are disabled it means that it wasn't launched with admin rights. Select the "Log bind failures to disk" and "Enable custom log path" settings, typing as custom log path "C:\Users\Desktop". Click the OK button, launch Visual Studio, and close or kill it once the error has happened. You will get some assembly binding failures: Important: Do not forget to click the Settings button again and select the "Log disabled" setting. In my case, I got binding failures for the assembly: Microsoft.VisualStudio.Services.WebApi, Version=14.0.0.0, Culture=neutral, PublicKeyToken=b03f5f7f11d50a3a and: Microsoft.VisualStudio.Services.Client, Version=14.0.0.0, Culture=neutral, PublicKeyToken=b03f5f7f11d50a3a Clicking on any item of the list opens your browser with an .htm file with the details of the failure, the folders where it was searched for, etc.: The third approach is using the Process Monitor tool by Microsoft (formerly by Sysinternals). This approach can be used with any application, managed (.NET-based) or native. It allows you to find failures locating files or registry entries. However, the volume of information can be very big, so it should be used as a last resort. To use it, when launched configure the filter to monitor only devenv.exe: And in the output you need to dig into the results finding PATH NOT FOUND or similar errors for files that never appear as SUCCESS: So, using any of these approaches I know now that my Visual Studio installation doesn't have the assemblies Microsoft.VisualStudio.Services.Client.dll and Microsoft.VisualStudio.Services.WebApi.dll. I haven't solved the problem yet (the repair option of Visual Studio doesn't reinstall them) but at least I have more information. ReSharper may conflict with the other Visual Studio addins and extensions so it is a nice to start the Visual Studio not a .sln file of the solution you're working with. JetBrains Platform Core Ide build 6.0.20141219.120158 on 20141219 12:56:02Z. I tried turning Enable code analysis off but the problem is still there.The freeze of the solution is caused by a feature that is meant to fasten up solution loading: parallel project initialization. Open Tools / Options in Visual Studio 2019 and find the Projects and Solutions node Android app apps Azure AzureDev binding C# CeBIT Dev feedback iOS json library Microsoft Mobile Services. I am working on neural network project and I want to have a folder with data images inside the solution which will After I created this folder about 1gb in size visual studio froze completely. Valdas3 opened this issue on Jan 5 2018 6 comments VS2017 will be no response when lots of images in my python project|Visual Studio and ReSharper are great but not together. Let me start Visual Studio. It is one of the best IDE out there especially if you are Microsoft shop. The Visual Studio UI hanged for mins before I could start coding. The build took very long to complete and the tests took forever to run. From time to time I'm unable to open any projects in Visual Studio as they all just get stuck on Preparing Solution. I've reinstalled three times using both the installer and windows uninstall and I am a beginner learning C#. If I disable this extension or ReSharper everything works fine. But with both enabled I get constant crashes. It is pretty frequent. Microsoft Visual Studio Enterprise 2017 RC Version 15.0.26127.3 JetBrains ReSharper I am not sure if this is completely related to Viasfora and ReSharper. I think it could be.Since ReSharper is integrating within Visual Studio deeply there are some use cases which may lead to freeze or crash of Visual Studio with ReSharper. JetBrains Platform Core Ide build 6.0.20141219.120158 on 20141219 12:56:02Z. in C# the slower my visual studio gets and then Visual Studio 2019 prompts up. Visual Studio Freezes when switching solution configuration from Debug to When Visual Studio is freezing the CPU load goes from around 5% to 50%.
